

# Energy Efficiency Advisor

## Overview

With homeowners becoming more aware of the energy they use in their homes and how they can save money by switching to energy efficient appliances this sector is rapidly growing. As an energy efficacy advisor you will give consultation to homeowners or home developers on how to save on their energy consumption. Not only will you reduce energy consumption, but you will also save your clients hundreds of dollars. You must be able to demonstrate knowledge on the new energy efficient technology and basic tradesmen skills.

## Roles and Responsibilities

An energy advisor is an individual who conducts EnerGuide home evaluations on behalf of Natural Resources Canada (NRCAN) licensed service organizations. Energy advisors provide third party expert advice to homeowners looking to consider responsible energy use, and can work with builders who wish to use the EnerGuide Rating System in planning and in the design stages of their new constructions. Energy advisors help ensure homes labelled under NRCAN's energy efficiency housing initiatives meet the requirements of the respective standards.
