

Energy Retrofitter

Overview

Always in a new location, you are implementing systems that save energy in homes, institutions, and businesses in this rapidly expanding field. As regulations change and social attitudes shift, more and more homeowners will be requesting energy

Roles and Responsibilities

You will be responsible for installing energy efficient systems, making upgrades to a building's infrastructure (such as plumbing, heating, insulation, lighting, windows etc.), draft-proofing, and assisting with energy audits. You will communicate with clients and auditors about appropriate retrofit solutions that are specific to each scenario

Skills: Mathematics, Customer Service, Communication, Technician, Problem Solving

Personal Interests: Interpersonal, Community, Policy, Speaking, Technology, Hands-on

Work Environment: Roaming in Homes, Contractor Businesses, Office

Education and Experience: Training in HVAC (heating, ventilation and air conditioning) systems, general contracting, energy management certification, and other trades is desirable

Salary: \$40,000-\$60,000
