

Wind Turbine Technician

Overview

Wind turbine technicians can be found high up on platforms inspecting, cleaning, calibrating, repairing, and troubleshooting the various components of a turbine to ensure efficient operation.

Roles and Responsibilities

Attention to detail is key here. You will need to be comfortable working in a small team or on your own as you assess the components of wind turbines and write field reports. Your ability to read technical diagrams, schematics, and illustrations will be essential. Problem-solving and technical skills will be important for this position.

Skills: Report Writing, Mathematics, Collaborator, Problem Solving, Technician

Personal Interests: Writing, Computers, Investigation, Hands-on, Technology, Socializing

Work Environment: Heights, Small Team, Outdoors

Education and Experience: College Degree, and an engineering background would be useful. Some courses: technological design, machine/manufacturing technology

Salary: \$\$18-\$26/hour
